MODULE 8 · ASSIGNMENT

Pick one screen and build it

Choose **Variant A** or **Variant B**. Build it in UIKit with a **Storyboard only**: set every view and constraint in Interface Builder. **Don't use UIStackView**: position everything with constraints. Swift code may only fill in data. It must not set frames, create constraints or use anchors.

Variant A · Profile

- Avatar: a 96 × 96 circle, centered
- Name: up to 2 lines, centered
- Stats: 3 equal columns with dividers (hint: Equal Widths)
- Follow and Message: equal widths with 12 pt between them, 48 pt tall
- About: the text wraps with no line limit

Variant B · Coffee order

- Image: always 16:9 (hint: Aspect Ratio constraint)
- Title wraps; the price never truncates (hint: Compression Resistance)
- Size buttons: 3 equal widths with 10 pt gaps, 48 pt tall
- Quantity row: label on the left, stepper on the right
- Order button: pinned to the safe-area bottom

Both variants

- Side margins of 16 pt. Content stays inside the safe area.
- Works on iPhone SE (3rd gen) and iPhone 16 Pro Max.
- Long text test. A: name "Maximilian Alexander von Habsburg". B: title "Iced Caramel Oat Milk Latte". Nothing overlaps or gets clipped.
- No red or orange constraint warnings in Interface Builder's Document Outline.
- No "Unable to simultaneously satisfy constraints" logs in the console.

Grading · 100 pts

Matches the design	**25**
Constraints and structure	**25**
Equal widths and fixed sizes	**20**
Long text test passes	**15**
Both devices, no IB or console warnings	**15**
